

What we offer

Consultancy services in the areas of:

- ▼ process automation
- ▼ quantitative finance
- ▼ investment strategies
- ▼ portfolio management
- ▼ risk analysis

We deliver fully fledged **software solutions** based on our proprietary platform built for:

- ▼ maximum flexibility
- ▼ workflow automation
- ▼ integration of technologies
- ▼ lower costs and complexity

Our solutions support:

- ▼ hedge funds
- ▼ portfolio and wealth managers
- ▼ banks
- ▼ traders

Why SOFISTAR?

- ▼ A team of highly qualified and experienced professionals from different backgrounds, whose skills are combined into one single discipline: the delivery of efficient business solutions
- ▼ We have a holistic approach to technology: our software and advice look at all the aspects of a client's ecosystem and must deliver quantifiable benefits
- ▼ We are translators: we bridge the gap between business and technology development by using "plain language" that all the parties involved can understand
- ▼ We are innovators: in our work we take inspiration from all the latest technical developments – from the world of apps and social media to the cloud. Such knowledge is passed on to our clients so they can always be at the cutting edge of financial technology

AWS Turnkey – Our Cloud-based Solution For Investment Professionals

Our **AWS Turnkey** is a cloud-based solution designed for hedge funds, traders and financial institutions that need flexible computing power to run their mission-critical processes. Sofistar's **AWS Turnkey** transfers the existing infrastructure to the cloud, while offering complete redundancy and the highest security standards in the industry. **Combined with Q-TRADE**, it offers the complete cloud-based investment management solution

The **AWS Turnkey** solution builds on Amazon Web Services (AWS), one of the most reliable cloud services available

AWS Turnkey gives access to all the advantages offered by AWS with the addition of the following benefits:

- ▼ **ultra-high security:** encrypted hard-disks, encrypted communication; access with a combination of password and USB stick
- ▼ **access:** with **AWS Turnkey** you can access your infrastructure from anywhere in the world. Simple. Fast. Secure.
- ▼ **customization:** the existing environment can be completely replicated thus eliminating the disruption normally associated with the adoption of new technology
- ▼ **inter-region backups:** the entire infrastructure can be backed-up from one continent to another eliminating the risk of fires, natural disasters and terrorist attacks
- ▼ **on-demand capacity:** servers can be added or removed and their power increased or decreased at any time. Server blueprints can be built and launched automatically, or as the need arises when running computation-intensive processes e.g. Monte Carlo simulations, derivatives pricing, risk analysis
- ▼ **transparency:** the infrastructure's status can be monitored in real time through our web console. User receive e-mail or text-alerts when the system reaches critical state.
- ▼ **redundancy:** the solution offers full redundancy: anytime, anywhere
- ▼ **anonymity:** Sofistar can manage directly the user's accounts with AWS, including payments, entitlements and other administrative functions. This means total anonymity as not even Amazon or your credit card company will know who the end-user is
- ▼ **transferability:** the infrastructure can be moved from one jurisdiction to another at any time within minutes in order to meet specific regulatory, compliance and fiscal needs
- ▼ **simplicity:** migration can be carried out remotely and usually takes only a few days depending on the complexity of the existing architecture

Together with our **consulting services** and our **dedicated support team**, we guarantee you the highest level of satisfaction, at a cost you never thought possible

Build a professional, secure, redundant infrastructure for as little as \$400 per month
